## **Project Report on**

# Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

#### 1. INTRODUCTION:

### 1.1 Project Overview –

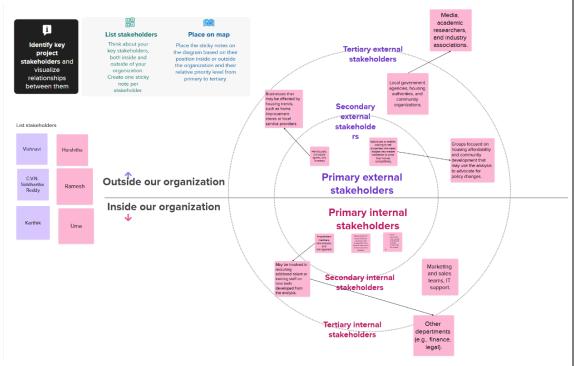

Utilizing Tableau's powerful visualization capabilities, the project seeks to uncover trends, patterns, and insights that can inform stakeholders, including buyers, sellers, and real estate professionals. By leveraging data-driven visualizations, the project will facilitate a deeper understanding of how different factors, such as neighborhood, property size, and condition, influence sale prices, ultimately aiding in informed decision-making within the housing market.

## 1.2 Purpose -

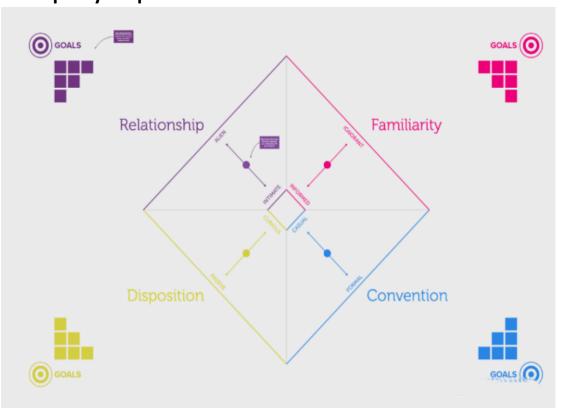

The purpose of the project "Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau" is to analyze the relationships between sale prices and property features, identify trends and patterns in the housing market, support data-driven decision-making for stakeholders, enhance understanding of market dynamics, and facilitate effective communication through engaging visualizations, ultimately empowering users to make informed real estate decisions.

## 2. IDEATION PHASE:

# 2.1 Brainstorming-

## 2.2 Empathy Map Canvas -

## 2.3 Problem Statements -

| Problem<br>Statement<br>(PS) | I am<br>(Customer)      | I'm trying<br>to                         | But  | Because                                       | Which makes me feel     |
|------------------------------|-------------------------|--|--|---|-------------------------|
| PS-1                         | First-time<br>homebuyer | Find an<br>affordable<br>starter<br>home | Prices keep rising,<br>and listings sell<br>too fast                     | Limited<br>inventory +<br>high<br>competition | Overwhelmed and anxious |
| PS-2                         | Growing family          | Upgrade to<br>a larger<br>home           | Mortgage rates<br>are too high, and<br>bigger homes are<br>out of budget | Inflation +<br>stagnant<br>wages              | Frustrated and stuck    |

# **3.** REQUIREMENT ANALYSIS:

# 3.1 Customer Journey map -

| <b>Housing Trends Analysis Insights</b> |   |   |  |  |  |
|---|---|---|--|--|--|
|   | AWARENESS   | CONSIDERATION   | EVALUATION   | DECISION   | PURCHASE   |
| OBJECTIVES                              | Research housing<br>market trends   | Explore different<br>neighborhoods and<br>properties  | Analyze property<br>values and market<br>trends  | Shortlist properties and schedule viewings   | Make an offer and negotiate terms  |
| NEEDS                                   | Homebuyers need access to reliable and up-to-date information on housing market trends to make informed decisions.                        | They require user-<br>friendly tools that allow<br>for easy visualization<br>and comparison of<br>properties and market<br>data | Buyers seek<br>personalized<br>recommendations<br>based on their<br>preferences and budget<br>to narrow down their<br>options effectively. | They need educational resources and support to navigate the complexities of the homebuying process confidently.          | Homebuyers require<br>transparency in<br>transactions, including<br>clear communication<br>about costs and<br>property histories |
| FEELINGS                                | Homebuyers feel curious<br>yet overwhelmed by the<br>vast amount of<br>information available<br>about the housing<br>market.              | They experience excitement mixed with anxiety as they explore different neighborhoods and properties                            | Buyers feel informed but<br>anxious about making<br>the right choice based<br>on market trends and<br>property values.                     | They experience a<br>blend of confidence and<br>stress as they shortlist<br>properties and navigate<br>negotiations.     | Homebuyers feel<br>nervous yet hopeful as<br>they make offers and<br>finalize the purchase<br>of their new home.                 |
| BARRIERS                                | Homebuyers encounter<br>information overload<br>and conflicting data that<br>make it difficult to<br>discern reliable market<br>insights. | They face challenges in finding trustworthy sources and relevant data to evaluate different neighborhoods and properties.       | Buyers struggle with a<br>lack of clarity on future<br>market conditions,<br>making it hard to<br>assess property values<br>accurately.    | They experience pressure from competition and time constraints, which can lead to rushed decisions and increased stress. | Homebuyers confront complex paperwork and fear of overpaying creating uncertainty during the negotiation process.                |

| ACTION ITEM   | POINT PERSON                |
|---|-----------------------------|
| Develop a<br>centralized<br>resource hub for<br>market insights | Marketing Team              |
| Create an intuitive property comparison tool                    | Product<br>Development Team |
| mplement<br>predictive analytics<br>for property values         | Data Analytics Tea          |
| Implement<br>predictive<br>analytics for<br>property values     | Real Estate Agent           |

## 3.2 Solution Requirement -

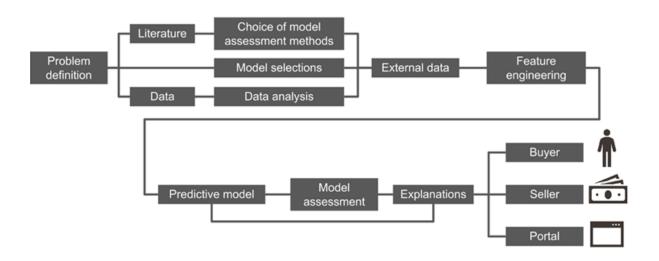

**Functional Requirements:** 

| FR     | Functional        | Sub Requirement (Story / Sub-Task)                    |
|--------|-------------------|---|
| No.    | Requirement       |   |
|        | (Epic)            |   |
| FR - 1 | Data Collection   | Collect sale price data through APIs or web scraping. |
| FR - 2 | Data Cleaning and | Clean data using scripts or Tableau Prep for analysis |
|        | Preparation       |   |

## Non-Functional Requirements –

| NFR No. | Non-Functional | Description   |  |
|---------|----------------|---|--|
|         | Requirement    |   |  |
| NFR – 1 | Usability      | The dashboard should be intuitive and easy to navigate for users of all skill |  |
|         |                | levels.   |  |
| NFR- 2  | Security       | Ensure that user data and sensitive   |  |
|         |                | information are protected through encryption and secure access controls.      |  |

# 3.3 Data Flow Diagram -

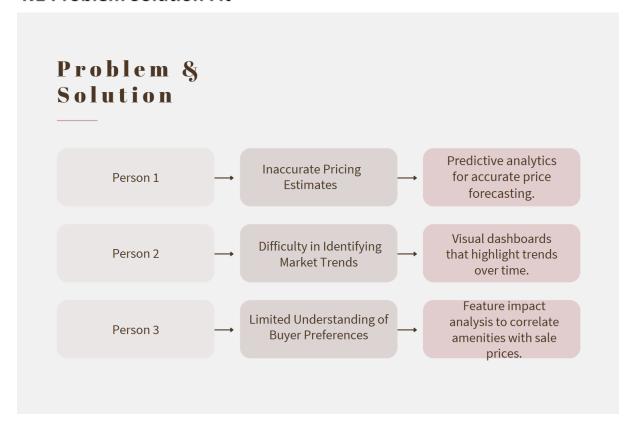

# 3.4 Technology Stack -

| Component   | Description             | Technology        |
|-------------|-------------------------|-------------------|
| Data Source | Collects housing market | SQL, APIs         |
|             | data from various       |                   |
|             | sources                 |                   |
| Reporting   | Generates reports for   | Tableau, Power BI |
|             | stakeholders            |                   |

## **4 PROJECT DESIGN PHASE:**

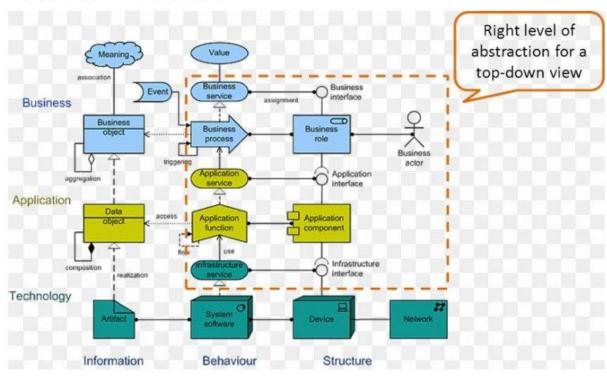

## 4.1 Problem Solution Fit -

# 4.2 Proposed Solution -

| SNO. | Parameter         | Description  |
|------|-------------------|--|
| 1.   | Problem Statement | Difficulty in interpreting complex housing market      |
|      | (Problem to be    | data to identify price patterns, feature preferences,  |
|      | solved)           | and regional trends for informed real estate           |
|      |                   | decisions.   |
| 2.   | Idea / Solution   | Interactive Tableau dashboards that visually correlate |
|      | description       | sale prices with property features, location data, and |
|      |                   | temporal trends through dynamic filters and            |
|      |                   | geospatial mapping.                                    |

# 4.3 Solution Architecture -

## 5 PROJECT PLANNING & SCHEDULING:

#### 5.1 Project Planning -

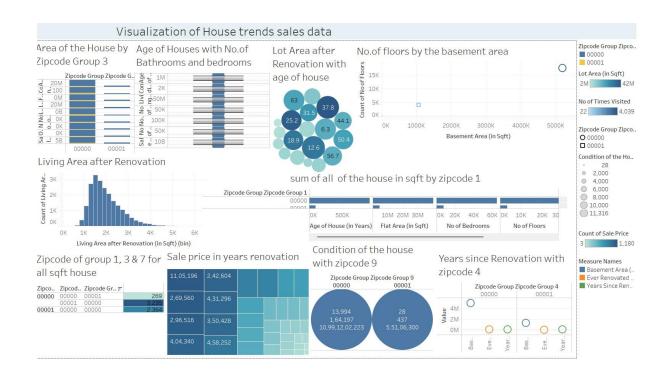

| Sprint   | Functional<br>Requirement<br>(Epic) | User<br>Story<br>Number | User<br>Story /<br>Task  | Story<br>Points | Priority | Team<br>Members    |
|----------|-------------------------------------|-------------------------|--|-----------------|----------|--------------------|
| Sprint 1 | Data Collection<br>and Preparation  | US 1                    | Gather<br>housing<br>market data<br>from various<br>sources          | 2               | High     | Member A,<br>B & C |
| Sprint 2 | Analysis and<br>Reporting           | US 2                    | Analyze<br>trends and<br>generate<br>insights from<br>visualizations | 1               | Medium   | Member A,<br>B & C |

## **6 FUNCTIONAL AND PERFORMANCE TESTING:**

## 6.1 Performance Testing -

| S.NO. | Parameter          | Screenshot/Values |  |
|-------|--------------------|-------------------|--|
| 1     | Data Visualization | 1                 |  |
| 2     | Story Design       | 10                |  |

## 7 RESULTS:

#### 8. ADVANTAGES & DISADVANTAGES:

- 1. Data-Driven Insights: The project provides valuable insights into housing market trends, enabling stakeholders to make informed decisions based on comprehensive data analysis and visualizations.
- 1. Data Limitations: The accuracy of the analysis is dependent on the quality and completeness of the underlying data; missing or outdated information can lead to misleading conclusions.
- 2. Enhanced Understanding: By visualizing complex data, the project simplifies the interpretation of market dynamics, helping users identify patterns and opportunities in the housing market.
- 2. Complexity of Factors: The housing market is influenced by numerous external factors (e.g., economic conditions, government policies) that may not be fully captured in the analysis, potentially oversimplifying the insights derived.

#### 9. CONCLUSION:

In conclusion, the project "Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau" successfully highlights the intricate relationships between sale prices and various property features, providing stakeholders with valuable insights into market dynamics. Through the use of engaging visualizations, the project not only enhances understanding of housing trends but also empowers users to make informed decisions in real estate transactions. While acknowledging the limitations of data quality and the complexity of external factors influencing the market, the findings contribute significantly to the ongoing discourse on housing market analysis and strategic planning.

## **10. FUTURE SCOPE:**

#### 1. Integration of Additional Data Sources:

Expanding the analysis to include economic indicators, demographic trends, and regional developments to provide a more comprehensive understanding of the housing market dynamics.

#### 2. Incorporation of Predictive Analytics:

Utilizing machine learning techniques to forecast future market trends and property values, enhancing the project's ability to provide actionable insights for stakeholders.

#### 3. Enhanced Interactivity and User Engagement:

Developing interactive features that allow users to customize their analyses and visualizations, increasing usability and engagement for a wider audience in the real estate sector.
